

Glory Of The Garden

⚠ **Security Warning:** Work in an isolated environment (virtual machine or container). Never open unknown files on your primary machine.

Challenge Description

This file contains more than it seems.

Hints

- What is a hex editor?
-

Tools Used

- **file:** Utility to identify file types and filesystem information
 - **strings:** Command-line tool to extract readable ASCII sequences from binary files
 - **grep:** Text search utility for filtering output
-

Complete Solution

Step 1: Download the file

Download the file named `garden.jpg` from the challenge page.

Step 2: Basic File Inspection

Verify the file type and understand its structure:

```
file garden.jpg
```

Expected output:

```
garden.jpg: JPEG image data, JFIF standard 1.01, resolution (DPI), density 72x72,
segment length 16, baseline, precision 8, 2999x2249, components 3
```

Step 3: Search for Visible Text

```
strings garden.jpg | grep -i "picoCTF"
```

The `strings` command scans the binary file and extracts all printable ASCII sequences. This is often effective for finding flags hidden in filesystem data.

Final Result

picoCTF{<REDACTED>}

Key Concepts

- **Strings Extraction:** A powerful technique for finding readable text embedded in binary files.
- **Binary Analysis:** Sometimes flags are directly visible as strings within binary data without needing specialized tools.
